K = 30 ★
0 1 10 100 1000 10000
One-to-one errors / million called founder alleles (symlog; linear 0–1)
0 200 400 600 800
Errors / million called genotypes
0 1 10 100
Switches / million phased true heterozygotes (symlog; linear 0–1)
d Phased share
e Allele callability
f Pedigree edges
0 20 40 60 80 100
Phased / correctly called true heterozygotes (%)
Called sample alleles (%)
no observed truth edges
